

TF-ADAS 45th Meeting: Considerations for Next Steps of DCAS

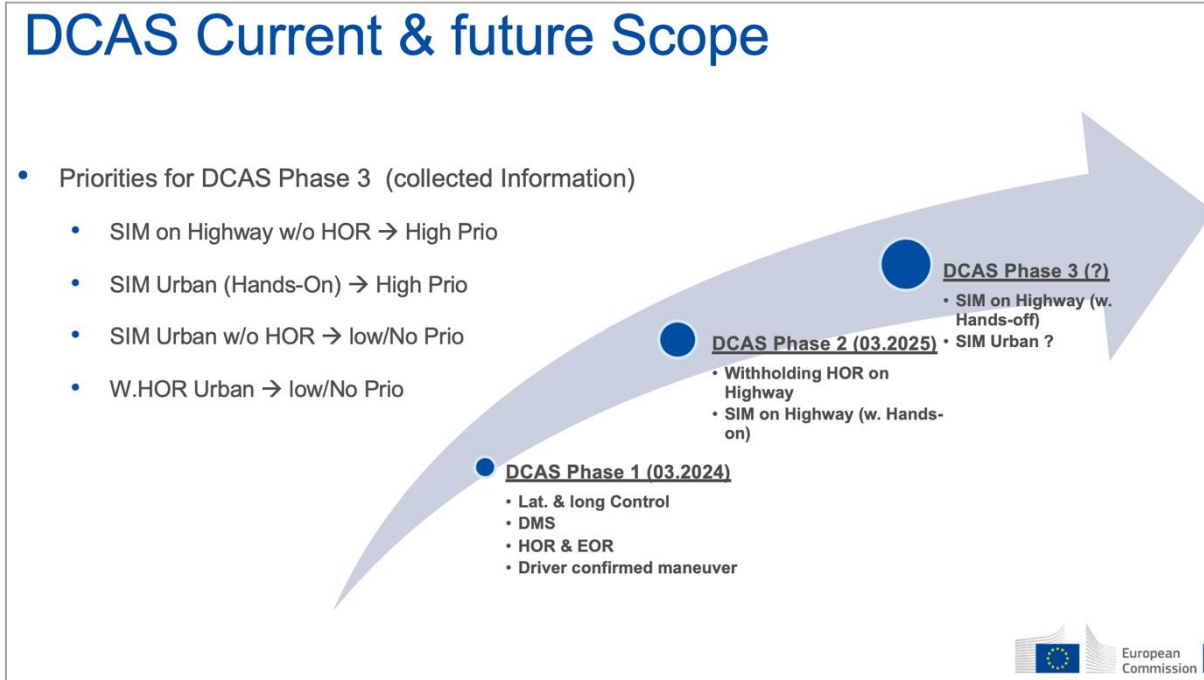

**E-Mobility
Europe**

TF ADAS 45th Meeting: 2026 March 3rd

Status of UN-R 171 Developments

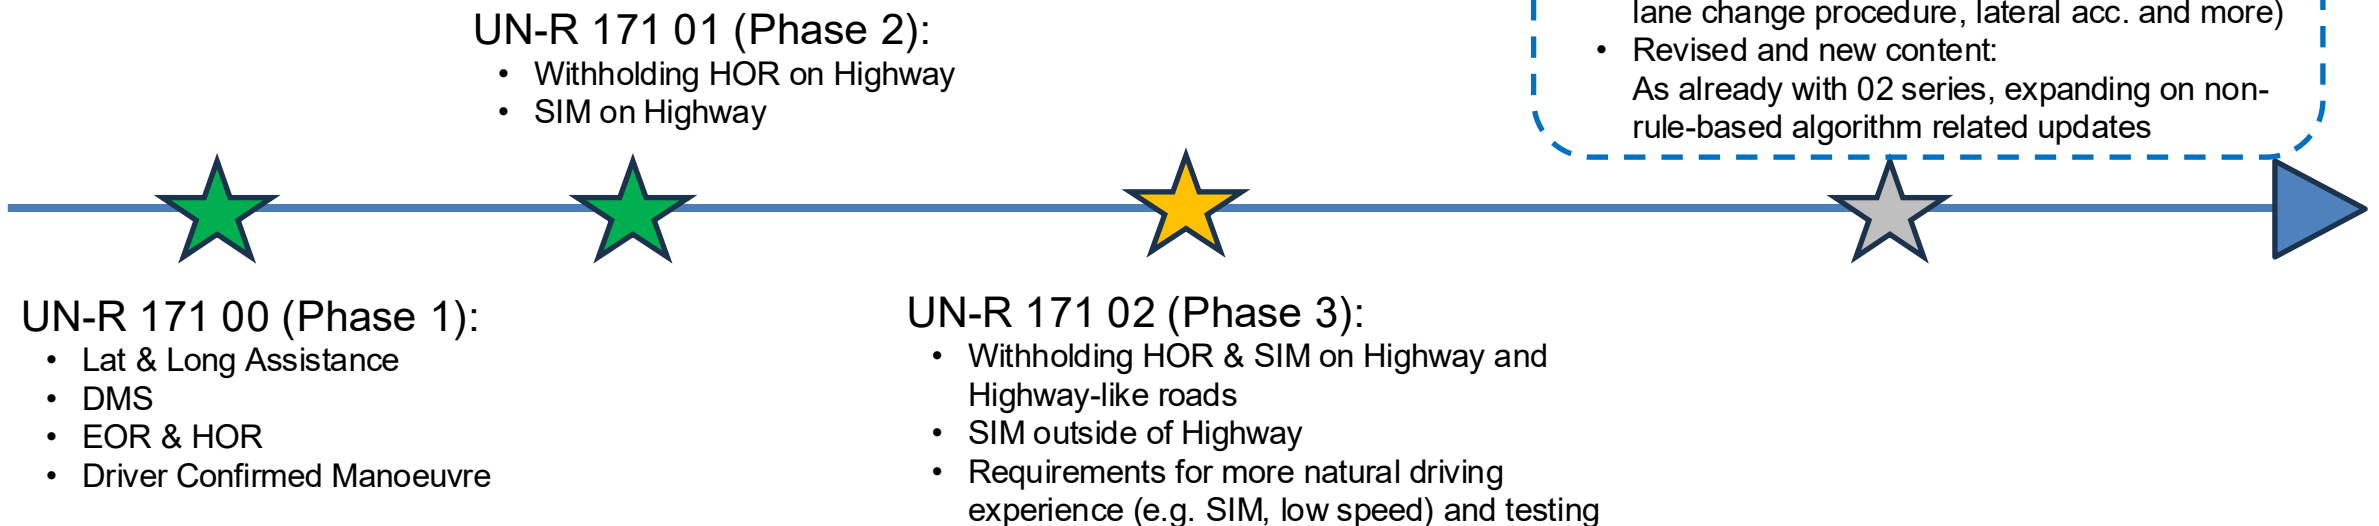

- Major progress was achieved with DCAS phase 3 developments and successful GRVA 24th meeting!
- Work priorities and structured work ensured completion of work – reference to ADAS 38th meeting
- A big Thank You to TF-ADAS Chair, Leadership, CPs and Parties enabling 02 series!

Reference: EC input ADAS 38 03

Outlook for UN-R 171 Developments

- Phase 4 considerations:
 - Enabling remaining functionality: wHOR + SIM in non-highway
 - Legacy requirements: Revisiting Lane Change, Lateral Acc and more...
 - Revised content for new technologies: Non-rule-based algorithm systems

Outlook for UN-R 171 Developments

In summary,

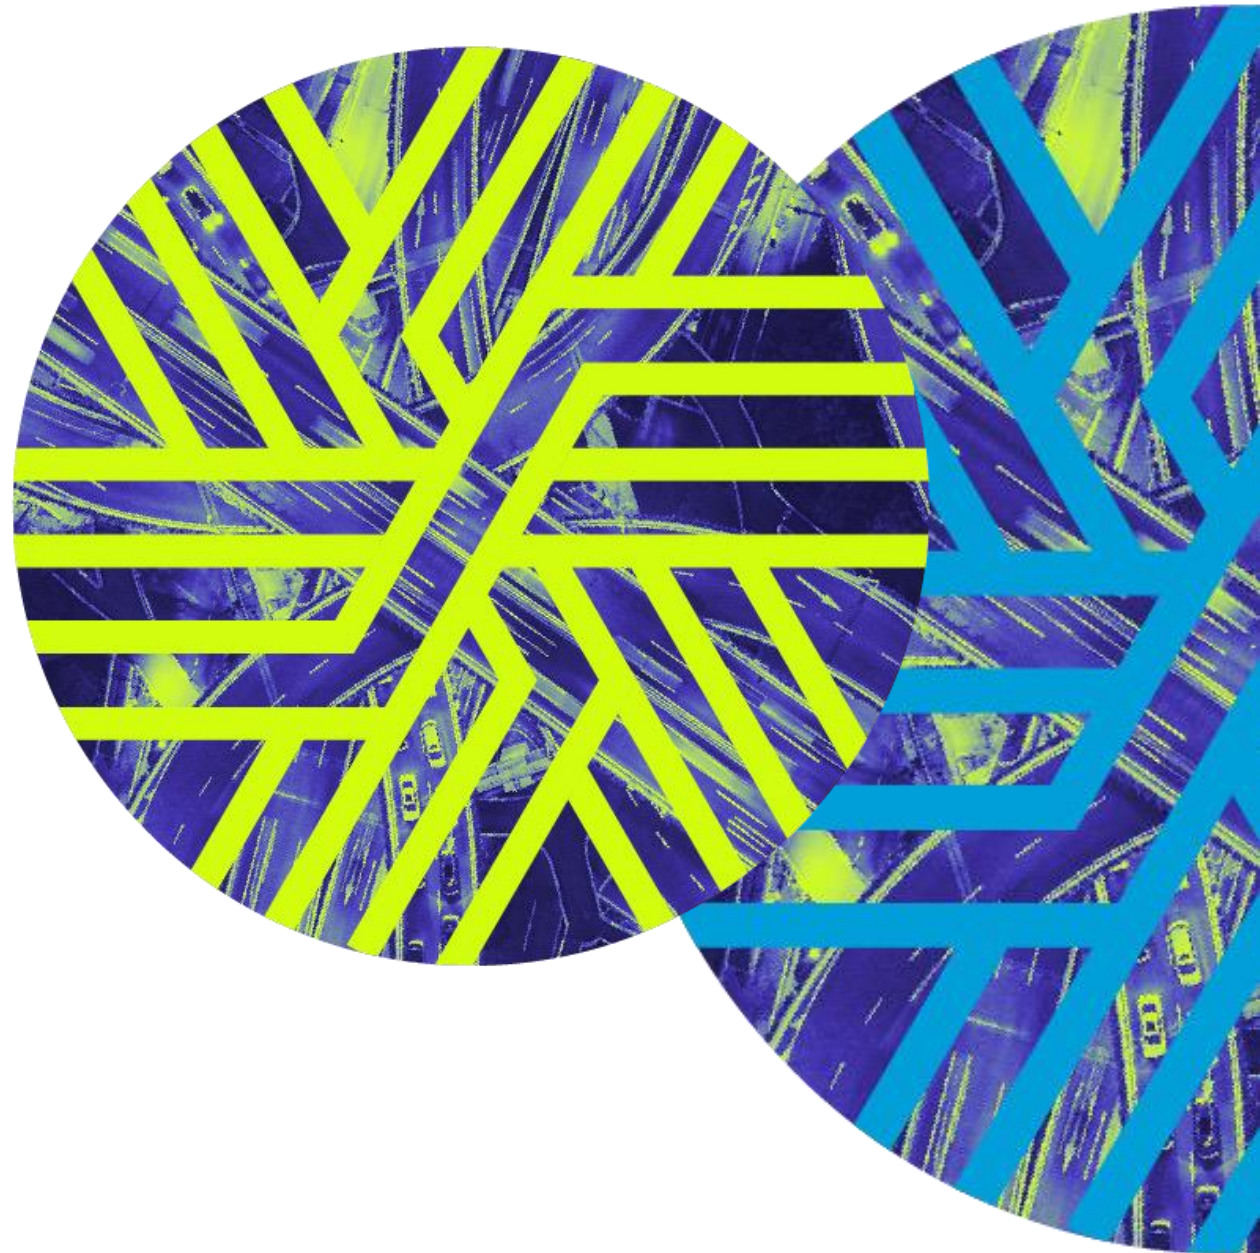

- EME recommends that TF-ADAS remains active and works towards phase 4 (03 series) of UN-R 171
- Addressing stakeholder concerns and considering pace of work:
 - Consider 3 to 6 month break from active TF-ADAS meetings,
 - SDG or Interested Parties would meanwhile review and prepare proposals for next steps
 - Hold plenary TF ADAS meeting before 2026 September's GRVA, prepare TF-ADAS report as agreed
 - September onwards, TF continues more active work drafting 03 series

Status of UN-R 171 Developments

Considerations for phase 3 (02 series):

- In addition to amendments as done by TF-ADAS leadership, highlighting further requirement(s) for revision,
- Exemplary requirements of concern:
 - 6.2.2. A lane change shall not be performed towards a lane intended for traffic moving in the opposite direction.
- While 02 series enables non-highway SIM and requirements since 01 series in para 6.3.9. may address this,
 - 6.3.9.3. If the manoeuvre would cause the vehicle to cross partially or fully into another lane, the system shall only do so if it is able to confirm that sufficient space and time is available. Such that there are no oncoming road users which would impede the system from completing the manoeuvre by reverting to the appropriate lane of travel. It shall not cross into another lane, where the direction of travel is in the opposite direction, to pass general traffic moving at an appropriate speed.
- We propose to consider cross-reference para 6.3.9. in para 6.2.2. as done in other similar requirements, to establish a clearer link between requirements and alternative conditions or scenarios where action is permitted
